

SAND POND

Norway Twp., Oxford Co., Me.
U.S.G.S. Norway, Me., (7.5')

Fishes

Brook trout	Blacknose dace
Rainbow smelt	Fallfish (chub)
Smallmouth bass	White sucker
Yellow perch	Redbreast sunfish
Chain pickerel	American eel
Minnows	
Lake chub	

Physical Characteristics

Area - 141 acres	Temperatures
	Surface - 72° F
Maximum depth - 56 feet	50 feet - 46° F

Principal fisheries: Smallmouth bass,
chain pickerel, smelt

Sand Pond, located west of Norway/South
Paris, provides excellent habitat for
coldwater fishes. Brook trout are present
in the inlet stream and an occasional
larger trout is caught in the pond.
Smallmouth bass provide the principal
fishery and smelts, minnows and young
perch provide ample forage for the bass.

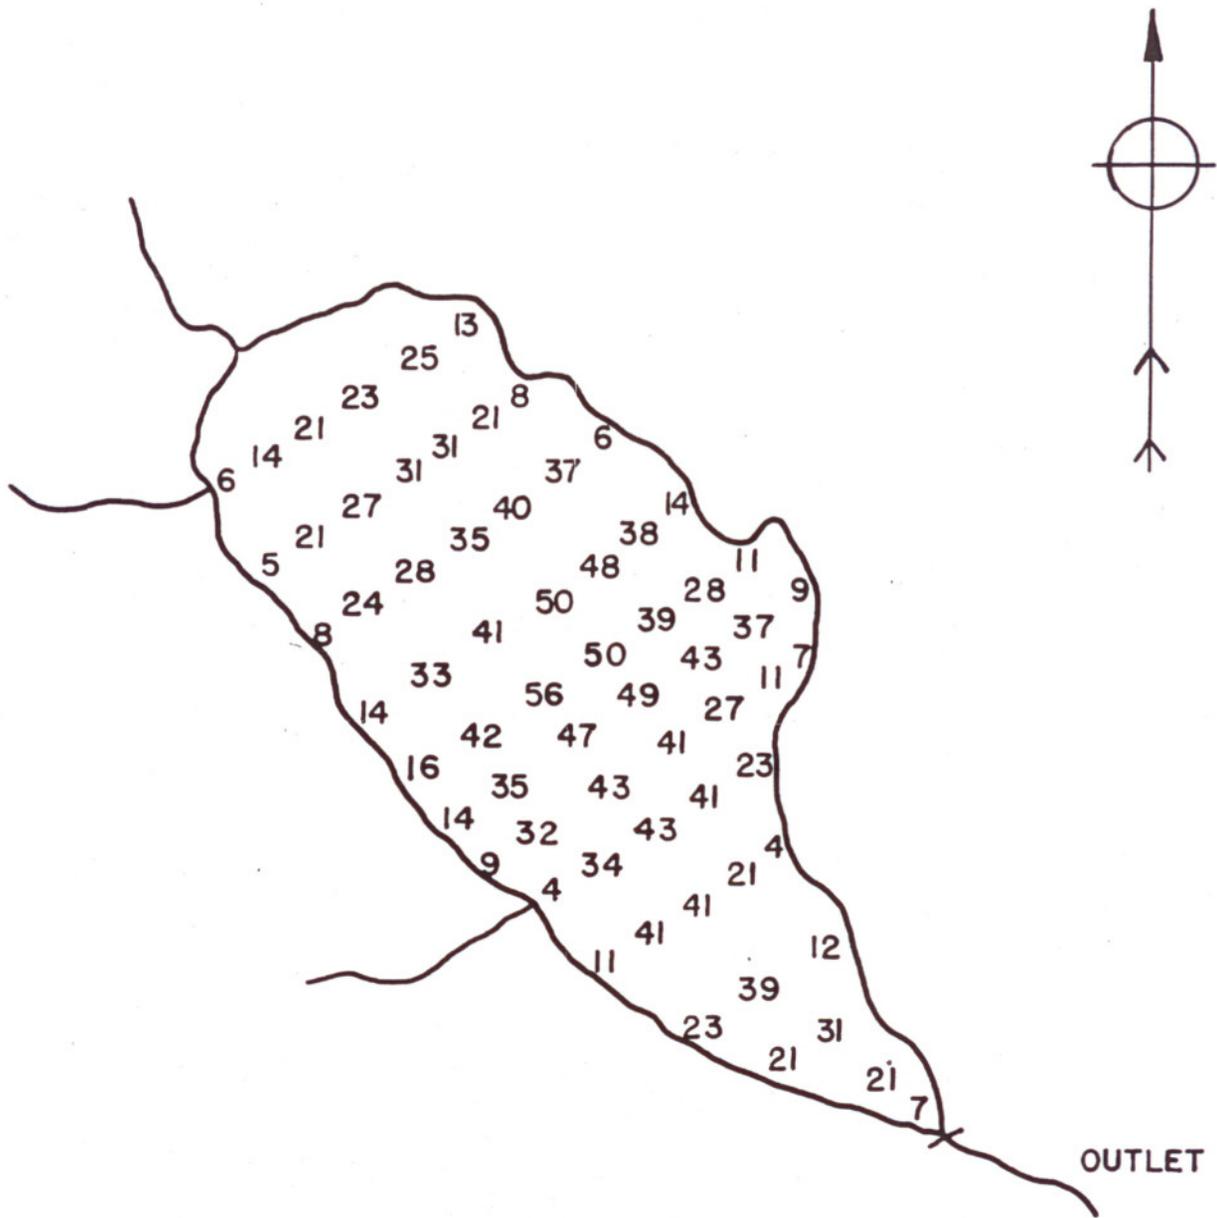

The inlet stream is a popular smelt
dipping location in the spring.

Stocking is necessary to improve the
quality of the trout fishery, but at the
present time there is no public access to
the pond. This lack of suitable access
precludes any stocking program. Purchasing
and developing public access to this pond
is a priority of this Department.

Surveyed - September, 1954
